# **1. INTRODUCTION**

**My Study Life** is a free online planner for students, teachers and lecturers designed to make your study life easier to manage.

*My Study Life* is a cross-platform planner for students, teachers and lecturers designed to make your study life easier to manage. *My Study Life* allows you to store your classes, homework and exams in the cloud making it available on any device, wherever you are.

Unlike a paper planner or school diary, *My Study Life* integrates all areas of your academic life - see homework due and overdue for classes, classes which conflict with your exams and even add revision tasks for a specific exam - all in a free, easy to use application. Far from your standard calendar, *My Study Life* is optimized to work for your school life right from the start with support for weekend and day rotation schedules. Add your classes and view them in a beautiful, instantly identifiable, familiar week view.

*My Study Life* seamlessly syncs your data between devices, allowing you to use the app even when offline. You can add a task on the move from your phone or tablet and it will be instantly available on the web application.

This application is available for Android, iPhone, and Windows devices as well as for web, but for the sake of this project report, I will be planning and executing tests only on an Android mobile device.

## **1.1. Purpose**

*My Study Life* is a planning and organizing application which is used for organizing classes, tasks and exams.

Some of the essential features of *My Study Life* are as follows:

### **Track Tasks**

Store your tasks -- homework, assignments, reminders, and revision -- with ease in the cloud, that can be accessible from anywhere.

### **Store Exams**

Store all your important exams alongside your classes and revision tasks.

### **Manage your classes**

Supporting day and week rotation timetables, advanced academic year/term support and integration into tasks.

### **Notifications**

It notifies you with reminders for unfinished tasks, upcoming exams

and classes before they take place.

## 1.2. Intended Audience

This application is intended for students and teachers of any academic level. It is used to organize and plan the classes, exams, assignments, revisions and so forth. It has features like **Academic Years/Terms** where the intended users can store their subjects and therefore classes, tasks and exams being visible between a start and end date you set. This way the semester system can also be entertained.

College and university level students and teachers can use this application for their annual, biannual/semester classes rotations, days rotations and even week rotations. Since all the data is synchronized on web servers, the users don't need to worry about data loss in case of device change or malfunctioning of any sort.

## 1.3. Scope

*My Study Life* is a planning and organizing mobile application. Unlike most school timetables, *My Study Life* also manages your classes and exams together with scheduling, tasks, reminders, and syncing.

This application supports both week and day rotation schedules as well as timetables which repeat every week. *My Study Life* also lets you assign a class to an academic year, and also to its terms and specify custom start/end dates if needed. *Holidays* feature of this software lets you see which days you have off, and also shift rotation schedules.

## **2. OVERALL DESCRIPTION**

### **2.1. Product Perspective**

*My Study Life* is supposed to be a scheduling and planning application. It has mobile versions as well as web versions available. This product provides simple mechanisms for users to plan and organize tasks.

### **2.2. Product Features**

The following are the main features that are included in *My Study Life*:

- User account
- Sign up
- Timetable
- Tasks
- Exams
- Settings
- Search
- Reminders

### **2.3. User Characteristics**

It is considered that the user do have the basic knowledge of operating smart phone device and have access to the internet.

### **2.4. Operating Environment**

*My Study Life* is available in both web and mobile platforms. Is isoperating in the following operating environments:

- Android
- iOS
- Windows Mobile
- Windows 8

## 2.5. Dependencies

This software highly depends on type of version of browser and/or mobile operating system being installed. Browser version should be used which have HTML5 support. Android 8+ version should be used. Windows 8+ operating system is supported. iOS 10+ version should be used.

## 2.6. Design and Implementation Constraints

This application is provisioned to be built on the Hybrid framework which is highly flexible. The data on this software is being constantly updated by millions of users worldwide. Decision regarding which database to use should be taken considering the fact that data being exchanged or stored is large, and the appropriate data management system will yield efficient performance.

# 3. SYSTEM FEATURES & REQUIREMENTS

## 3.1. System Features

### ➤ Sign Up

User can sign up directly for *My Study Life* using their Facebook, Google or Office 365 account. If user do not have a Facebook, Google or Office 365 account or would prefer to create an account manually, they can do on the sign up page. User will be asked whether they are a student or teacher and to provide or confirm their details.

### ➤ Subjects

A subject or course is used to group your classes, tasks and exams together. The subject consists of a name and color, in order to make the subject distinguishable across the application.

### ➤ Classes\

Also known as lessons, classes in *My Study Life* can be a one-off event (such as an extra revision session for Computing) or a recurring event with multiple occurrences. Once the class has been created its type cannot be changed.

### ➤ Tasks

Tasks in *My Study Life* allow you to track your homework, assignments, revision and set general reminders.

➤ **Exams**

*My Study Life* allows you to add your exams to appear alongside your classes in your timetable. It will also warn you of any classes which conflict with the exam and lets you track your revision progress using revision tasks. An exam belongs to a subject and must have a date, start time and duration. All other fields such as module, seat and room are optional.

➤ **Academic Years, Terms and Holidays**

An academic year and its terms are used to represent your school year and any terms (semesters, trimesters, quarters etc.) that you may have. Both years and terms have start end dates and are used to constrain a class to repeat between those start and end dates.

➤ **Timetable**

User should see the option to add an academic year. An academic year represents a school year (e.g. September 2015 – July 2016) and its terms are used to segment that school year. When creating an academic year user can tell *My Study Life* how their schedule works (fixed, week or day rotation). You can read more about academic years and terms [here](#).

### 3.2. Functional Requirements

Modules	Functional Requirements
Sign Up	<ul style="list-style-type: none"><li>• User can sign up using their Facebook account</li><li>• User can sign up using their Google account</li><li>• User can sign up using there Office 365 account</li><li>• User can sign up by tapping on sign up button using their email account</li></ul>
Sign In	<ul style="list-style-type: none"><li>• User can sign in using their Facebook account</li><li>• User can sign in using their Google account</li><li>• User can sign in using there Office 365 account</li><li>• User can sign in by tapping on “Sign in with email”</li></ul>
New User	<ul style="list-style-type: none"><li>• User can enter their school year tenure</li><li>• User can submit school start date</li><li>• User can submit school start time</li></ul>
Dashboard	<ul style="list-style-type: none"><li>• User can view their upcoming and current tasks, classes, exams and reminders</li><li>• User can add new task from dashboard by tapping on “New Task”</li><li>• User can view Menu from dashboard</li></ul>
Menu	<ul style="list-style-type: none"><li>• Username and email address on top of menu split screen</li><li>• Dashboard</li><li>• Calendar</li><li>• Tasks</li><li>• Exams</li><li>• Schedule</li><li>• Settings</li></ul>

Sign Out	<ul style="list-style-type: none"> <li>• User signs out of the application</li> </ul>

### 3.3. Non-Functional Requirements

#### ➤ Performance

The system must be interactive and the updates must be fast. So, in every action-response of the system, there are no immediate delays. In case of adding or changing tasks, classes or exams the changes made must appear seamless and immediate. Also connecting to user accounts shouldn't take more than 2 seconds.

➤ **Scalability**

The app should be able to adopt itself to increased usage or able to handle more data as time progress. When the user data increases app should be capable of handling them without delay by optimizing the way storage is done and accessed.

➤ **Responsiveness**

The application should be responsive to the user input or to any external interrupt which is of highest priority and return back to same state.

➤ **Usability**

User should be able to understand the flow of app easily, that is users should be able to use the app without any guideline or help from manuals.

➤ **Reliability**

The application should be reliable to perform the business, i.e when user perform some action it should be acknowledged with confirmation.

➤ **Availability**

The user can access the application to install and look for regular updates and give feedback from Google Play store.

➤ **Screen Adaption**

The application should be able to render its layout to different screen sizes, along with automatic adjustment of font size and image rendering

➤ **Network Coverage**

The app should be able to look out for WiFi, if it's not available then it should automatically switch to mobile network.
